

Guidelines—Preparing Poster Presentations for the 21st International NDTE of Wood Symposium

Please prepare your poster in **landscape format**. The maximum size for each poster is **110 cm (43.3 in.) wide by 86.4 cm (34.0 in.) high** (see schematic below). Include a title, presenter's name and address, abstract, key points, conclusions, and important supporting visuals such as charts, tables, diagrams, or photographs. To create a visually effective poster, minimize the amount of text and number of visuals. During the poster session, attendees browse among the presentations and speak directly with presenters. The poster session is informal, conversational, and highly conducive to the interchange of information between audience and presenter. It is recommended that each presenter brings copies of a small version of the poster to the booth for distribution.
